

Efficient Load Balancing in Hybrid Clouds through Optimized VM Migration Strategies

Mayadunne S.U.A.
(Reg. No.: MS23017610)

A THESIS
SUBMITTED TO
SRI LANKA INSTITUTE OF INFORMATION TECHNOLOGY
IN PARTIAL FULFILMENT OF THE REQUIREMENTS
FOR THE DEGREE OF
MASTER OF SCIENCE IN INFORMATION TECHNOLOGY

December 2024

I certify that I have read this thesis and that in my opinion it is fully adequate, in scope and in quality, as a thesis for the degree of Master of Science.

Dr. Harinda Fernando

Approved for MSc. Research Project:

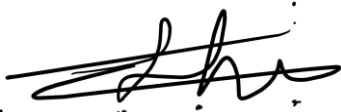

MSc. Programme Co-ordinator, SLIIT

Approved for MSc:

Head of Graduate Studies, FoC, SLIIT

DECLARATION

This is to certify that the work is entirely my own and not that of any other person, unless explicitly acknowledged (including citation of published and unpublished sources). The work has not previously been submitted in any form to the Sri Lanka Institute of Information Technology or to any other institution for assessment for any other purpose.

ABSTRACT

Efficient Load Balancing in Hybrid Clouds through Optimized VM Migration Strategies

Mayadunne S.U.A.

MSc. in Information Technology

Supervisor: Dr. Harinda Fernando

December 2024

Dynamic VM migration optimization plays a pivotal role in enhancing the efficiency, performance, and cost-effectiveness of hybrid cloud environments. By intelligently transferring virtual machines (VMs) between private and public cloud resources, organizations can optimize resource utilization, improve application performance, and ensure business continuity.

This research explores the challenges and opportunities associated with dynamic VM migration optimization in hybrid clouds. It delves into existing optimization algorithms, performance metrics, and security considerations. Furthermore, the research investigates the potential of emerging technologies like artificial intelligence and machine learning to enhance optimization strategies.

Key research contributions include a comprehensive evaluation of existing optimization algorithms, considering their strengths, weaknesses, and suitability for different hybrid cloud scenarios followed by the development of novel optimization techniques that incorporate advanced machine learning algorithms for more accurate workload prediction and resource allocation. An in-depth analysis of security implications associated with VM migration and the development of security-centric optimization strategies to mitigate risks will also be conducted. The exploration of the integration of dynamic VM migration optimization with emerging technologies like container orchestration and serverless computing to address the evolving needs of modern applications would be the cornerstone for this research project.

This research also aims to provide valuable insights for organizations seeking to optimize their hybrid cloud environments. The findings can guide the development of effective VM migration strategies that improve resource utilization, enhance application performance, and ensure a secure and scalable hybrid cloud infrastructure.

ACKNOWLEDGEMENT

I would like to express my heartfelt gratitude to all those who have supported me throughout the journey of this research project. First and foremost, I thank my supervisor, Dr. Harinda Fernando, for his unwavering support and mentorship. His expertise and constructive feedback significantly enriched my understanding of legacy application migration and cloud technologies. Further, his guidance not only helped me refine my research objectives but also inspired me to approach challenges with a problem-solving mindset.

I am also incredibly grateful to my peers and colleagues, whose collaboration and valuable insights have greatly enhanced the quality of this work. The discussions we had and the knowledge we shared were instrumental in shaping my research direction and providing different perspectives on the complexities of cloud migration. Their encouragement and camaraderie created a supportive environment that fostered creativity and innovation.

Special thanks to the industry experts I looked up for guidance from, whose willingness to share their experiences and insights provided a rich foundation for my research. Their input was invaluable in understanding the real-world implications of legacy application migration, and their diverse perspectives contributed significantly to the depth of my findings.

I would also like to acknowledge Sri Lanka Institute of Information Technology for providing the necessary resources and facilities that enabled me to conduct this research. The access to relevant literature, databases, and technological tools was crucial in facilitating my exploration of the subject matter. I appreciate the institutional support that allowed me to focus on my research without undue distraction.

Lastly, I want to extend my heartfelt appreciation to my family and friends for their unconditional support and encouragement. Their belief in my abilities and constant motivation have been a source of strength throughout this project. Whether through late-night discussions, words of encouragement, or simply being there during moments of doubt, their unwavering support has been pivotal in helping me navigate the challenges of this research.

In conclusion, I am deeply thankful to everyone who played a role in this journey. Your contributions, whether direct or indirect, have made this research endeavor possible, and I am genuinely appreciative of the support system that surrounded me during this project.

TABLE OF CONTENTS

DECLARATION.....	ii
ABSTRACT	iii
ACKNOWLEDGEMENT.....	iv
TABLE OF CONTENTS	v
List of Figures.....	viii
List of Tables.....	ix
Chapter 1 : Introduction.....	1
1.1 Research Objectives.....	3
1.2 Problem Statement.....	4
1.3 Proposed Solution.....	4
1.4 Approach	5
Chapter 2 : Background of the Research.....	8
2.1 Advanced Approaches to VM Migration in Hybrid Clouds.....	10
2.2 Evolution of Cloud Computing and Virtualization in Hybrid Clouds.....	11
2.3 Key Challenges in Hybrid Cloud VM Migration	11
Chapter 3 : Literature Review	13
Chapter 4 : Methodology.....	22
4.1 Architecture of the Migration System	22
4.2 Tools and Technologies Used.....	23
4.3 File Transfer Process	24
4.4 Automation using AWS Lambda.....	25
4.4.1 AWS Lambda Automation Overview.....	25
4.4.2 Using Lambda Automation to Migrate Large-Scale Applications Between Instances.	25
4.4.3 Explanation of the Code	26
4.5 Integration with PHP for Monitoring and Control.....	27
4.6 Managing Downtime and Traffic Redirection.....	27
4.7 Security Considerations	28
4.8 Testing and Validation.....	28
Chapter 5 : Implementation.....	30
5.1 Overall Mechanism.....	30
5.1.1 The Need for Website Migration	30
5.1.2 Architecture Overview: Components and Technologies	31
5.1.3 Migration Mechanism.....	31
5.1.4 Detailed Steps of the Migration Process.....	32
5.1.5 Advantages of Using Lambda for Website Migration	33

5.1.6 Challenges and Future Enhancements	34
5.1.7 Setting Up AWS IAM Role Polices	34
5.2 Developing the Lambda Automated Function for Moving the Websites	36
5.3 Admin Control for Handle the Automation.....	38
5.4 AWS Configurations	39
5.4.1 Testing Instances with elastic IP's.....	39
5.4.2 Hosting the Applications with S3 Bucket.....	44
5.4.3 Integrating Dynamic Content via EC2 or Lambda	45
5.4.4 Database Integration Using RDS.....	46
5.4.1 Hosting Large Web Applications with S3 and AWS Services	46
5.4.2 High Availability and Fault Tolerance	47
5.4.3 Traffic Management with Route 53.....	47
5.4.4 Monitoring and Automation with CloudWatch	47
5.4.5 AWS Lambda Functions.....	51
5.5 Detailed Steps for Automating Traffic-Based Migration with Lambda	51
5.5.1 CloudWatch Alarm Setup for Traffic Monitoring	51
5.5.2 Lambda Automation for Instance Scaling or Traffic Migration	52
5.5.3 Setting up the Lambda Function.....	52
5.5.4 Setting Up CloudWatch Trails for Automated Functions.....	52
5.5.5 Step-by-Step Mechanism for Setting up Alarms Based on Traffic Rate	53
5.5.6 How CloudWatch Alarms Activate and Automate Lambda Functions	54
5.5.7 The Mechanism Behind CloudWatch Alarms and Lambda Automation	54
5.5.8 Traffic-Based Alarms for Large-Scale Applications	55
5.5.9 How CloudWatch Alarms Work in Practice.....	55
5.5.10 How CloudWatch Alarms Can Be Used in Our Task.....	56
Chapter 6 : Results and Analysis.....	57
6.1 Additional Results	60
6.2 Performance Analysis.....	62
6.3 AWS Direct Connect	62
6.4 AWS Storage Gateway	63
6.5 AWS Snowball	63
6.6 AWS Database Migration Service (DMS).....	64
6.7 AWS Application Migration Service (MGN).....	64
6.8 VMware Cloud on AWS	65
6.9 Comparative Analysis of Methods	65
6.10 Recommendations for Hybrid Cloud Migration.....	67
Chapter 7 : Conclusion & Future Works	68
